

Dear all,

Regarding to changes has done for higher security, henceforth you should establish new VPN connection to access the servers farm. All data will cross through the VPN connection and it will mitigate security risks.

Firstly it is necessary to get certificate with “AnyConnect” program and then connect to the network. Please follow the instruction.

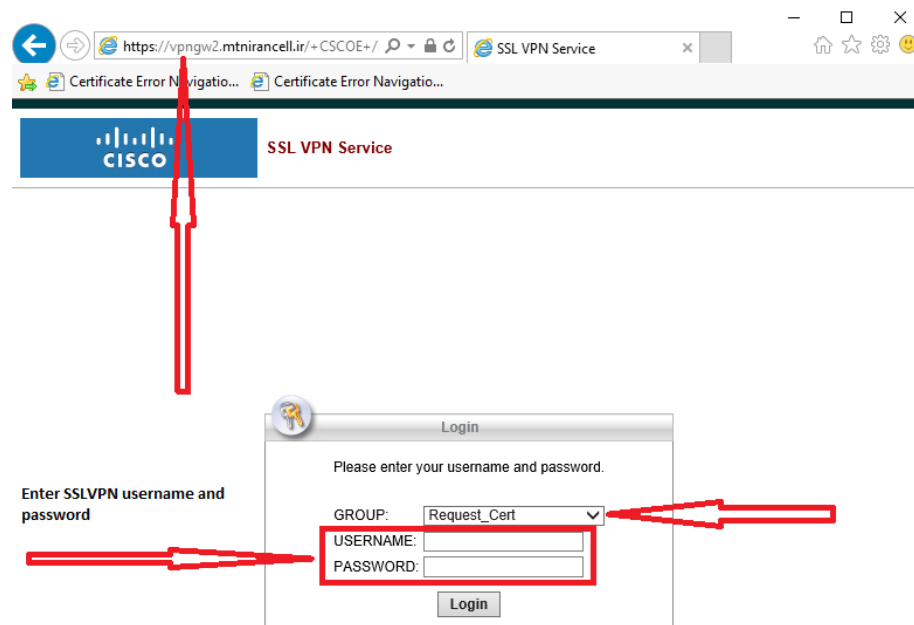

Process of Connecting to Network with AnyConnect:

- 1-Installing AnyConnect Software
- 1.1- Install AnyConnect Posture Software
- 2-Change Password
- 3-Request certificate
- 4- Installing certificate
- 5-Connect with administrator group
- 6-Trouble shooting

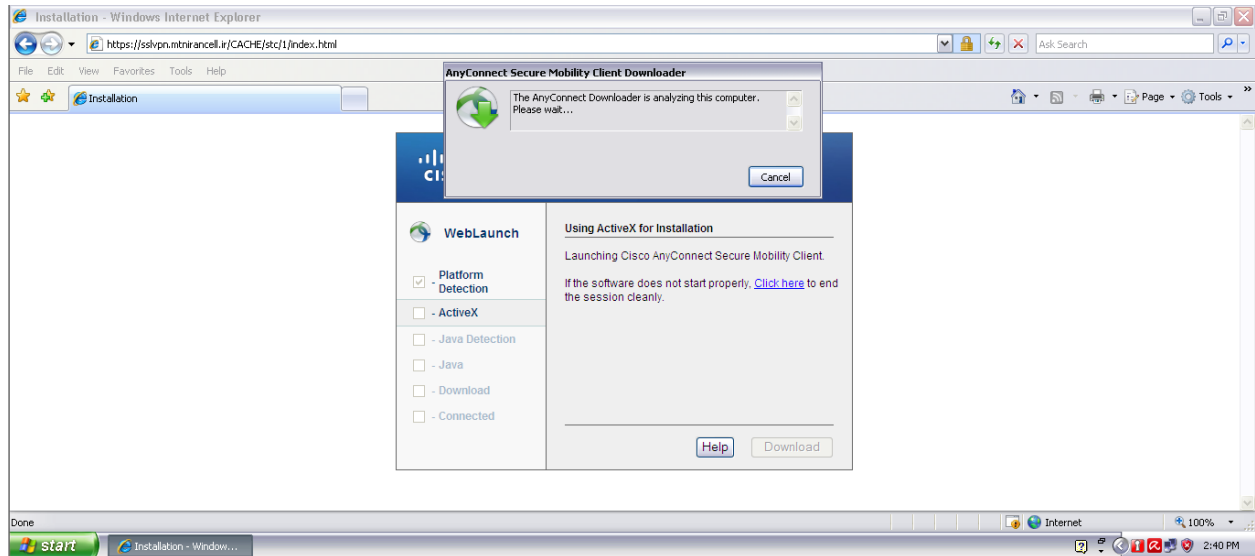

Please follow the instruction bellow in detail:

1-Installing AnyConnect Software

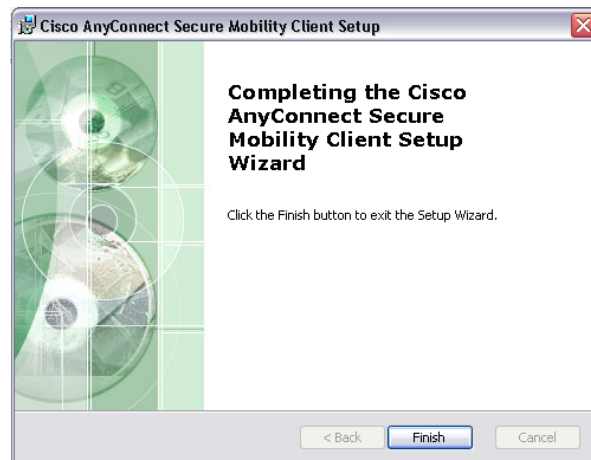

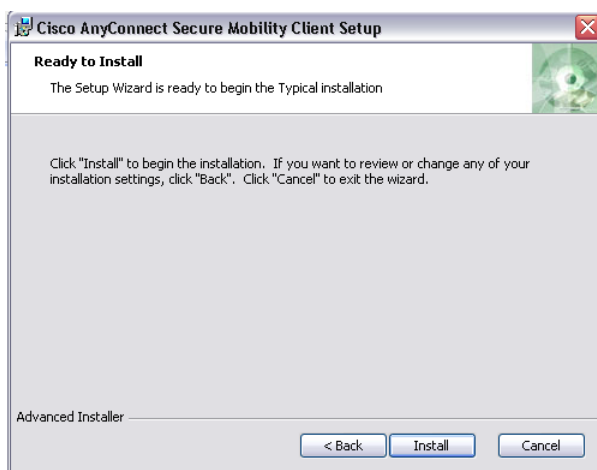

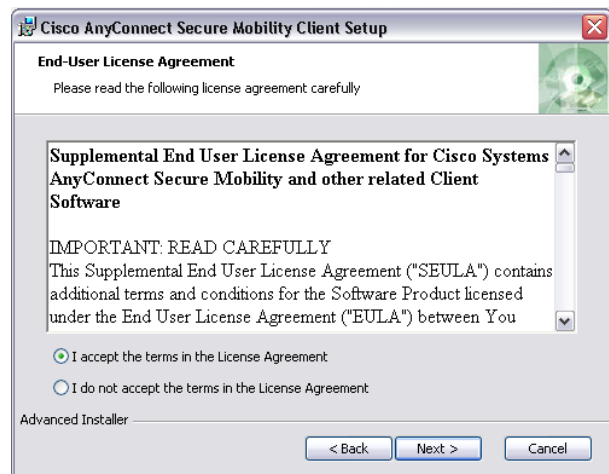

Type <https://vpngw.mtnirancell.ir> in address bar (IE) to begin procedure. Select **Request_Cert** as a group and use the username and password that sent to you to enter to the site:

NOTE: If AnyConnect program was not installed in your computer, the procedure of installing will begin otherwise AnyConnect will call automatically and connect to the network.

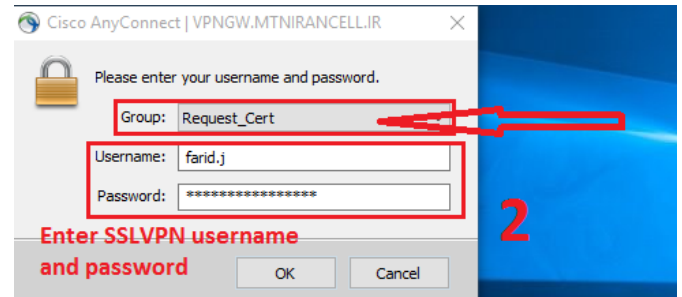

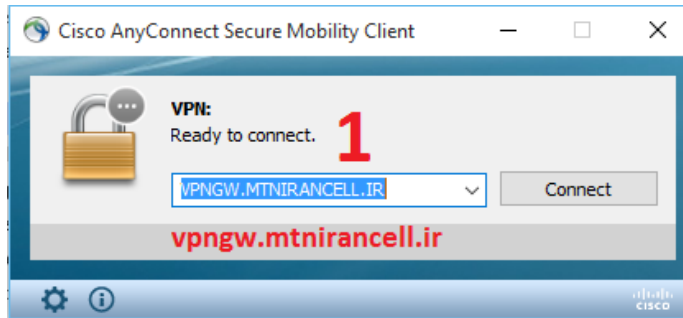

How to install AnyConnect program?

If you encountered with any error during the installation please follow step 6 of trouble shooting (Error 1)

1.1 Install AnyConnect Posture Software:

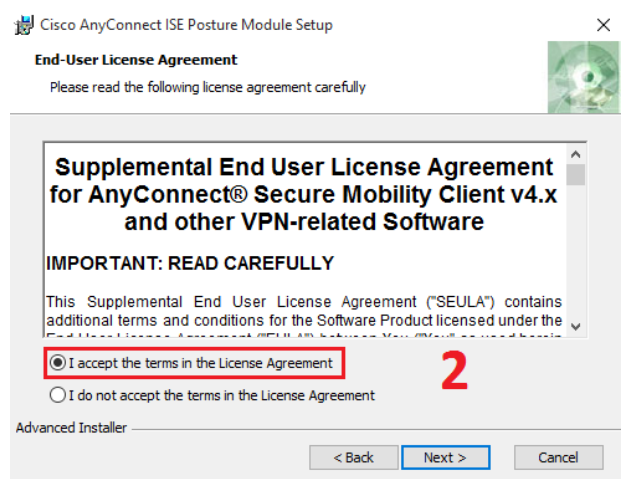

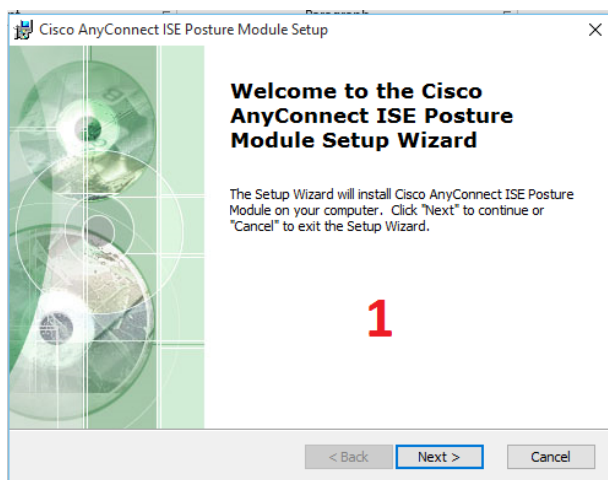

This software is available at the following link for download first connect via **request-cert** group in AnyConnect and then use below link:

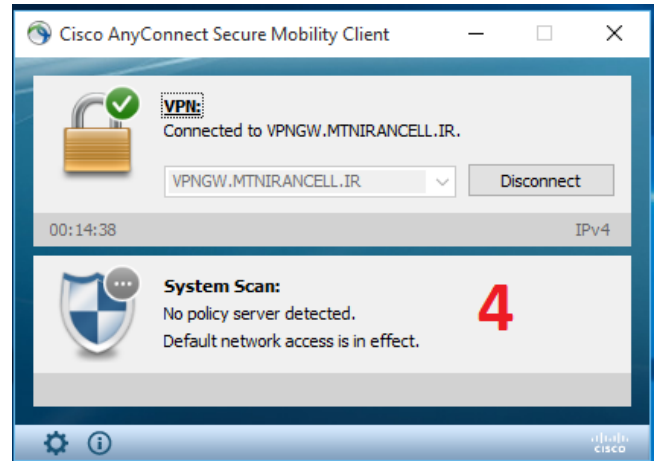

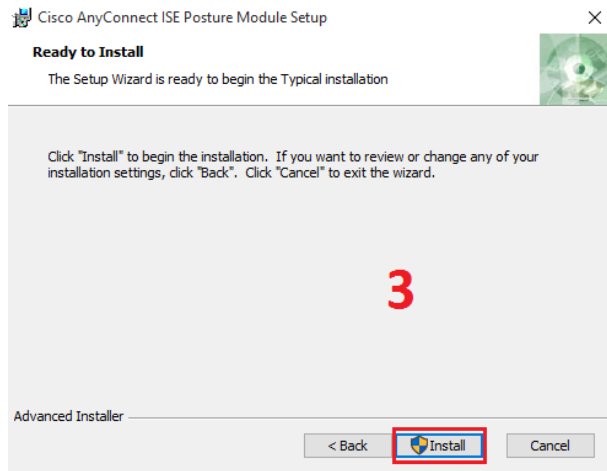

After connected to SSLVPN by **Req_Cert** Group Please use below link:

<http://10.132.243.229/anyconnect-iseposture.msi>

Download and Install it:

2-Change Password

To change the VPN password connect with request_cert Group in AnyConnect then browse below link in your internet explorer:

<http://10.132.243.229/iisadmpwd/aexp2b.asp>

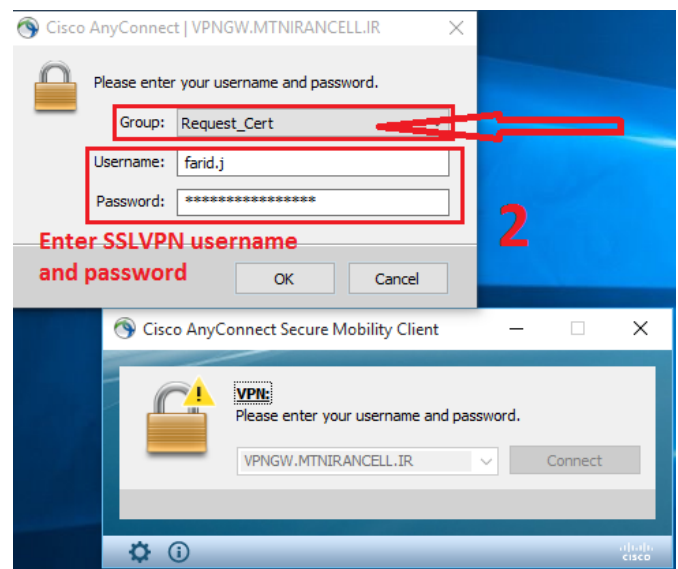

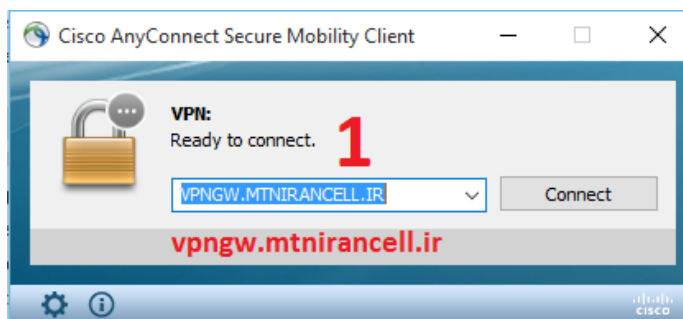

Enter "Secureaaaa.com" as a domain.

3-Request certificate

After installing Anyconnect's program, the following window will appear on the screen then you should type "**vpngw.mtnirancell.ir**" in front of "Connect to" and press select button choose "Request_Cert" group from drop-down.

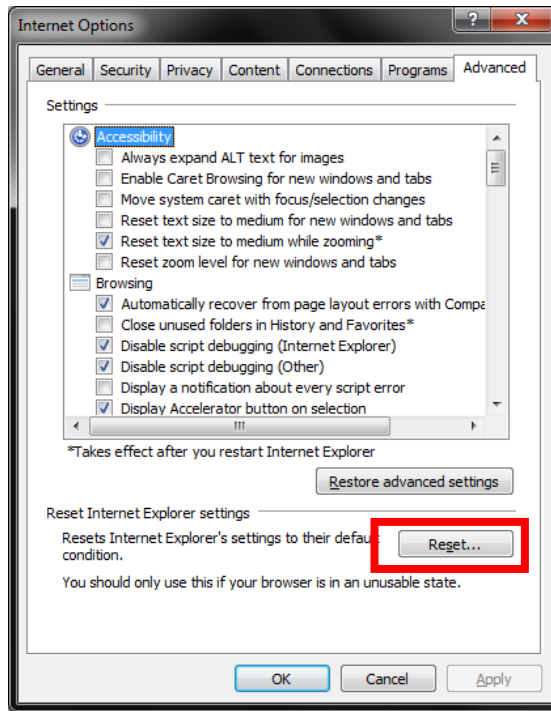

(If you receive any message during the procedure due to confirmation certificate, choose "yes" button.)

After that, enter your username and password (**this username and password is for your VPN connection, it is not the MTNirancell username and password**) to connect to network to get certificate.

 Please make sure that before you request certificate your IE is reset.

Open Internet Explorer → Tools → Internet option → Advance Tab → select Reset Button.

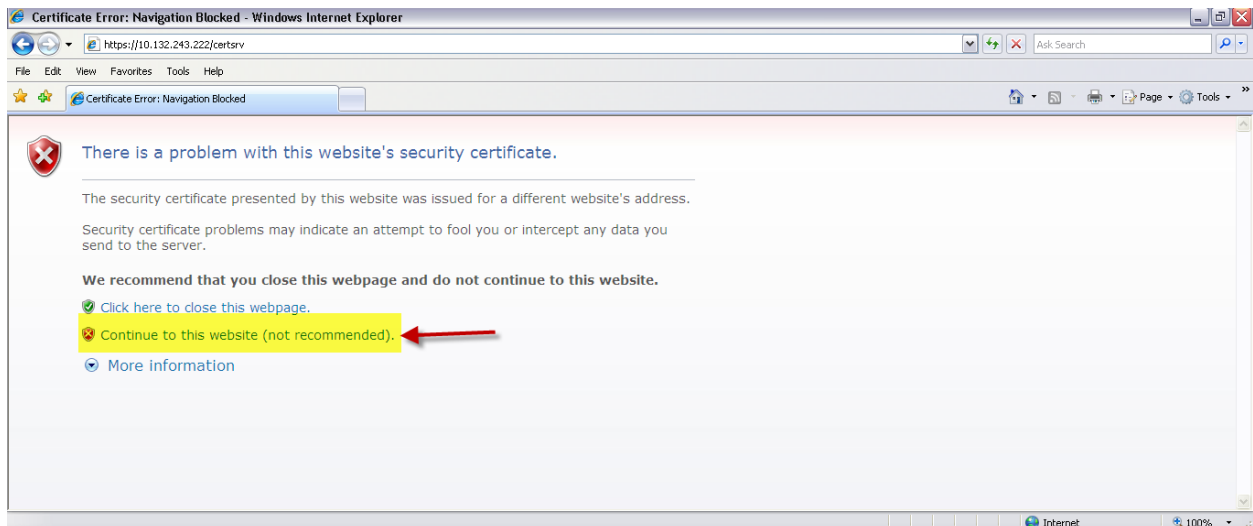

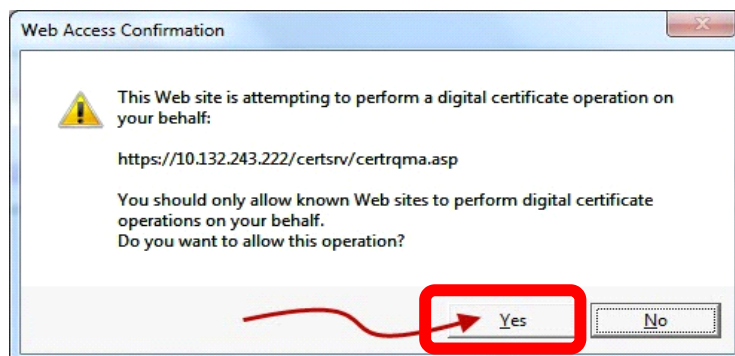

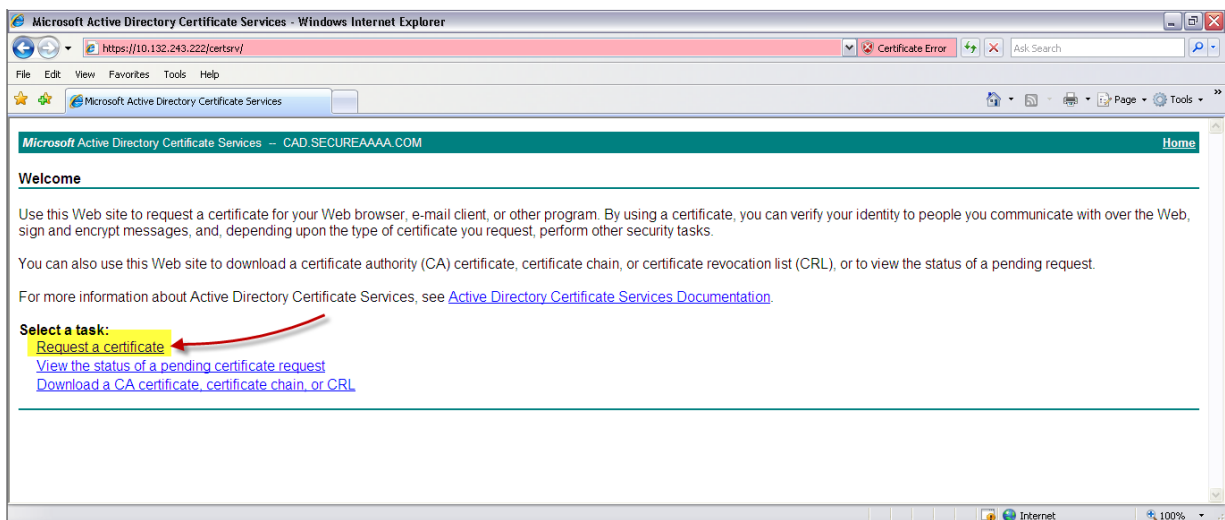

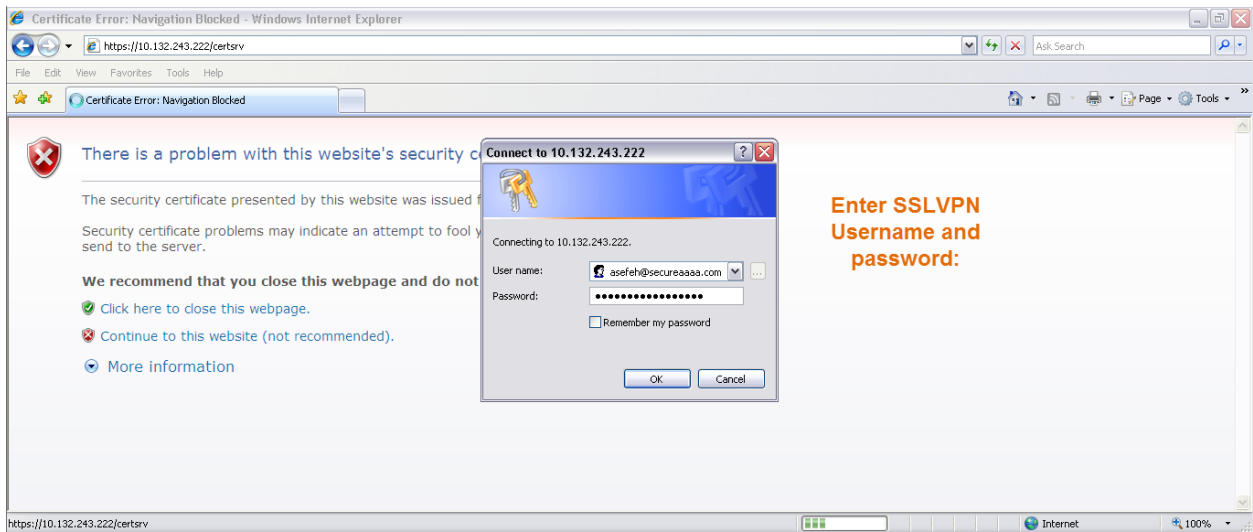

Then In your address bar type below link:

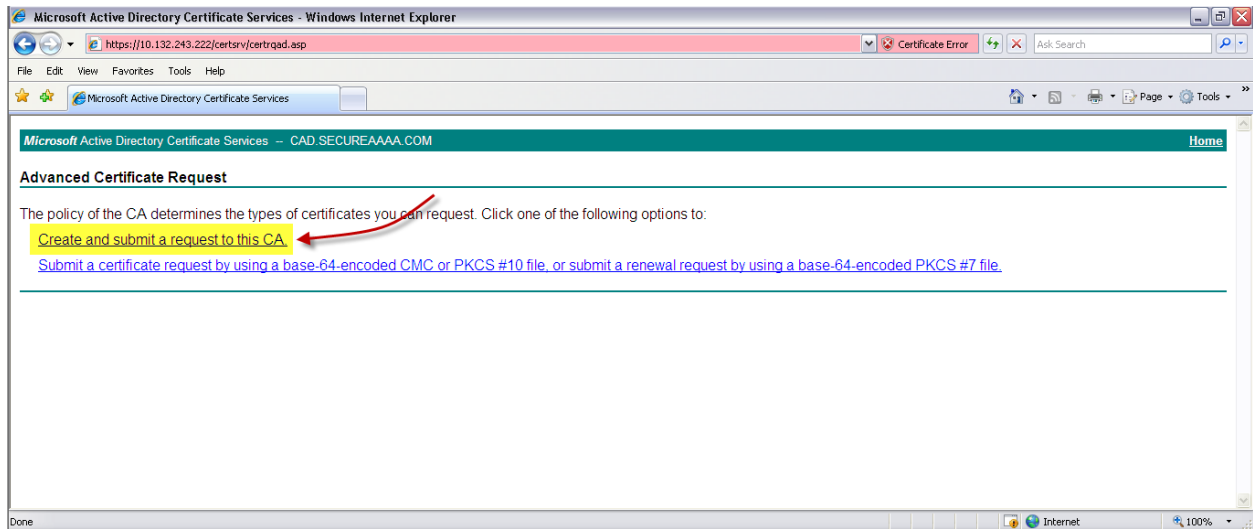

<https://10.132.243.222/certsrv>

NOTE 1: you have to use Internet Explorer (IE) 8 or higher. Do not use any other browsers .if you use other browsers, it will not work.

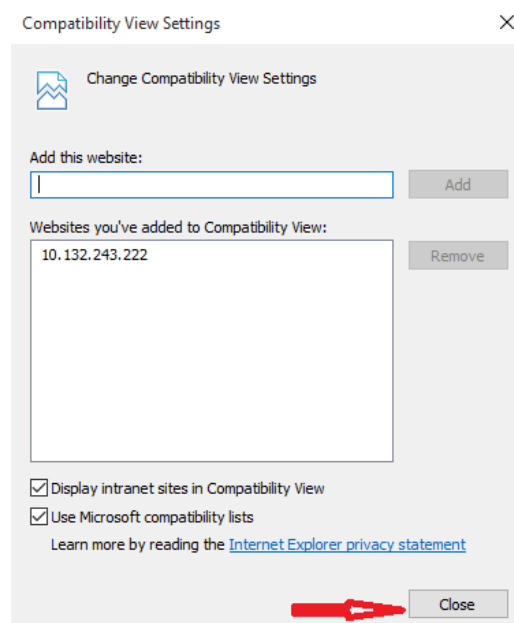

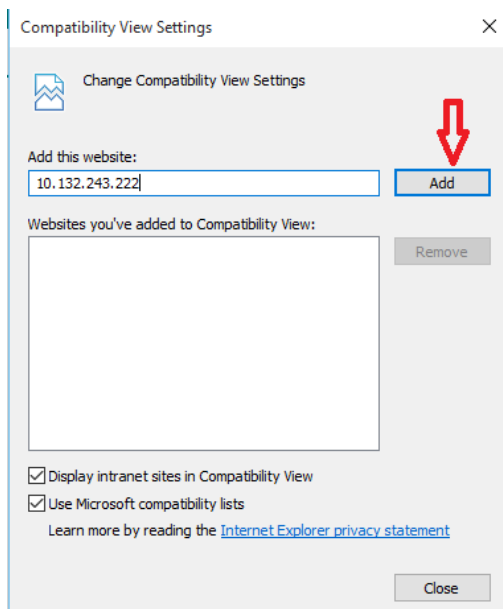

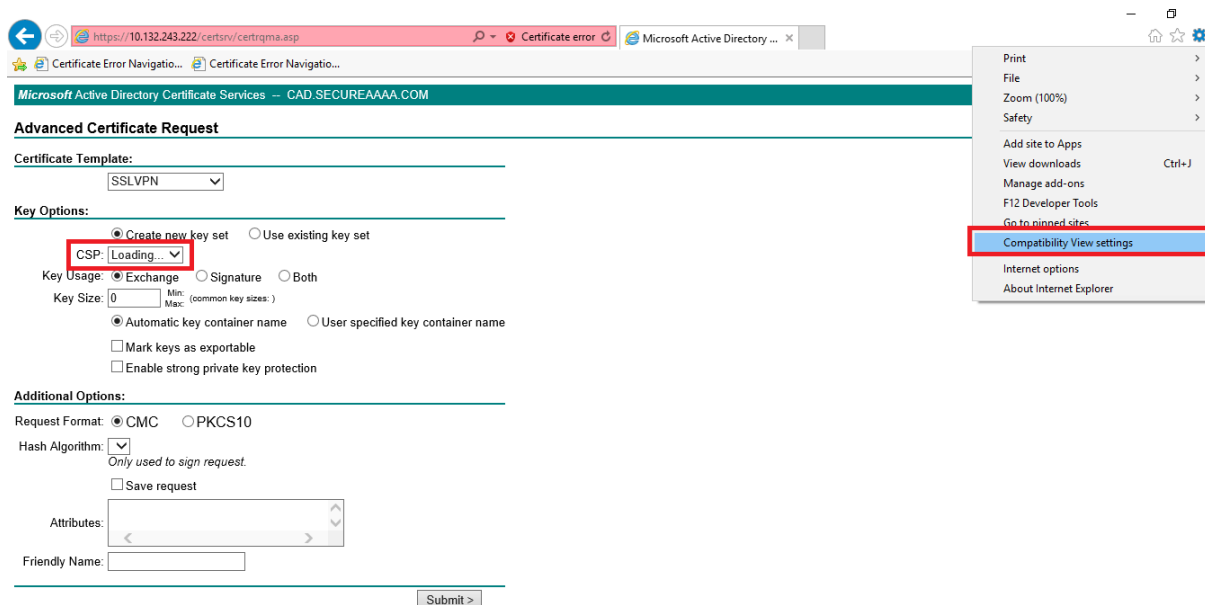

NOTE 2: If you cannot open this page please follow step 6 of trouble shooting (**Error 2**) in this guide to solve your problem.

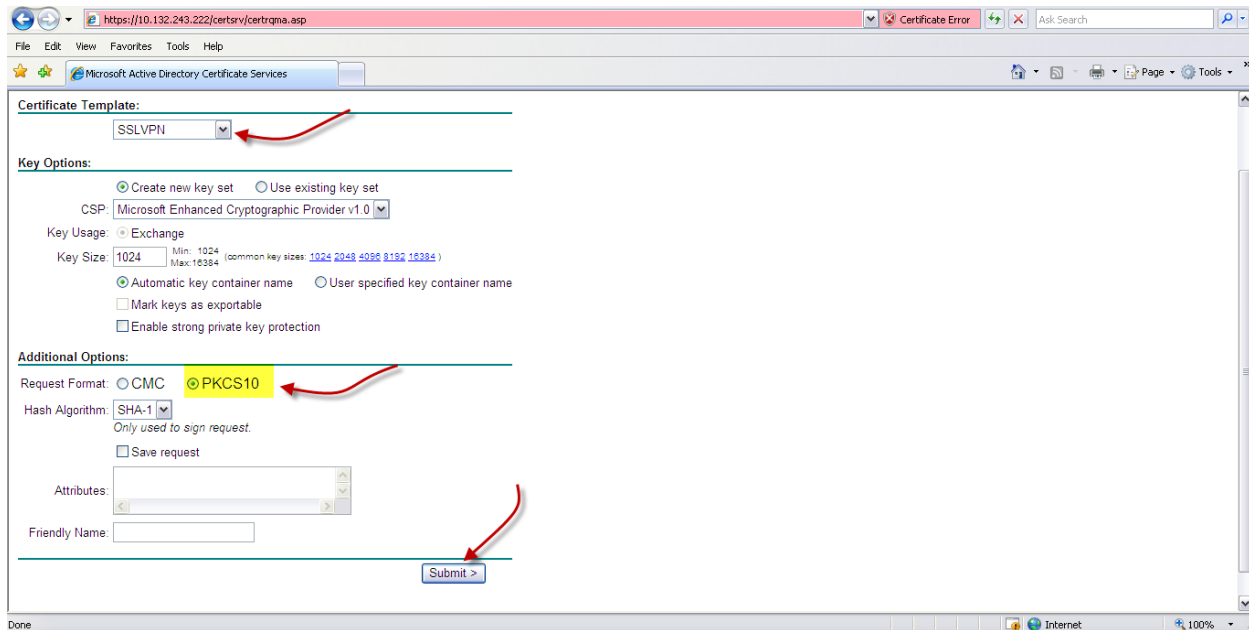

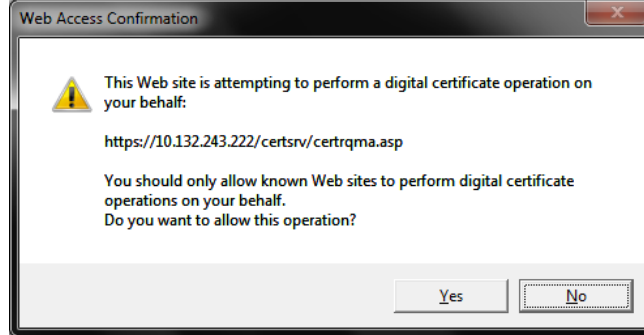

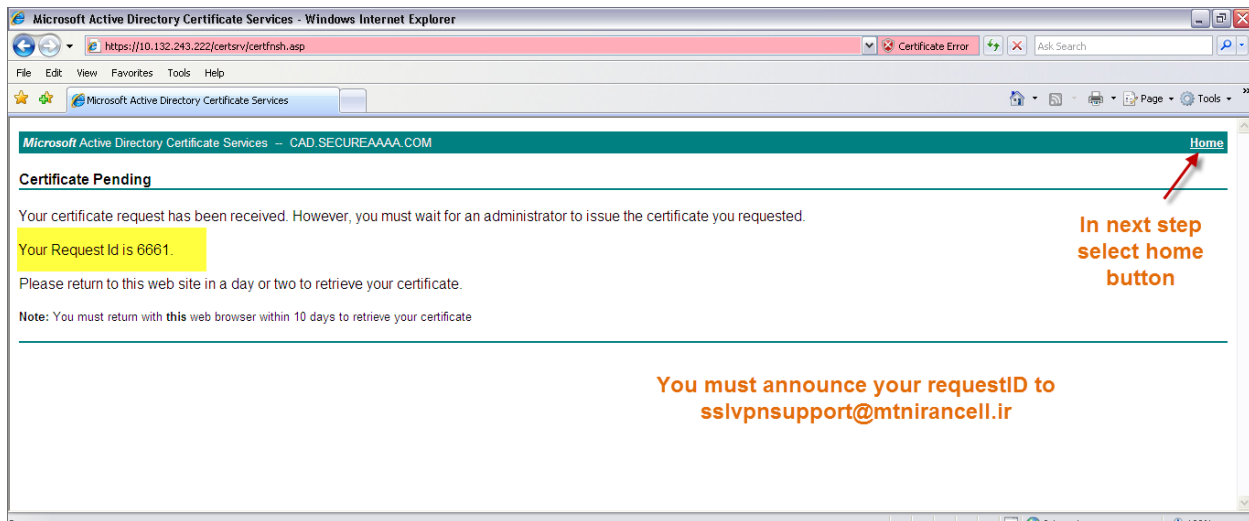

If the **CSP box** does not load please enable compatibility view from the right side of your IE setting icon, add our site to compatibility view enabled websites.

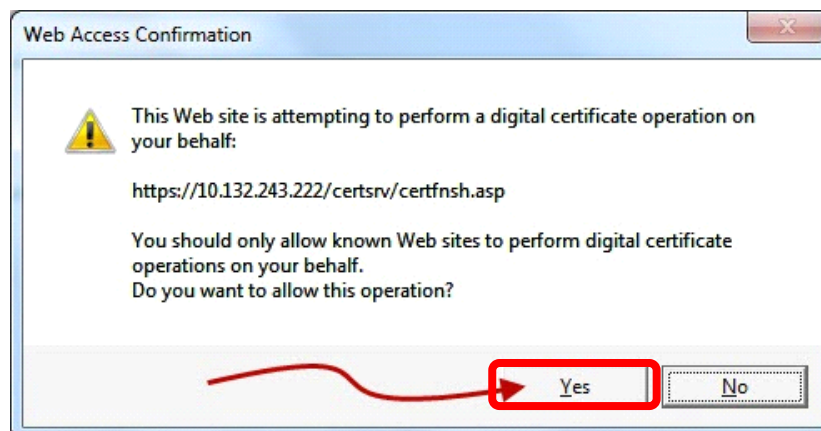

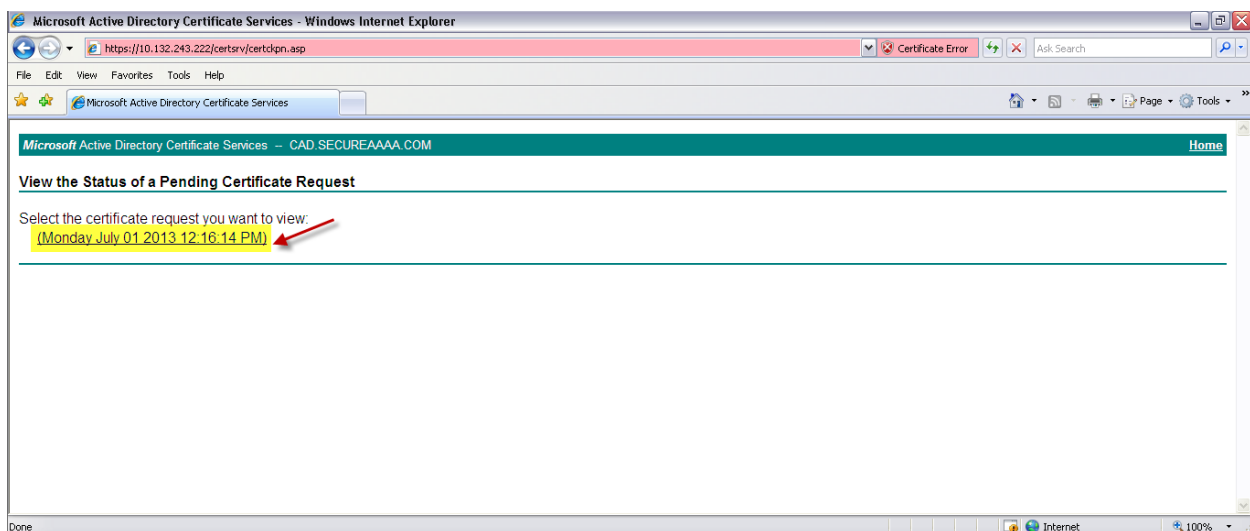

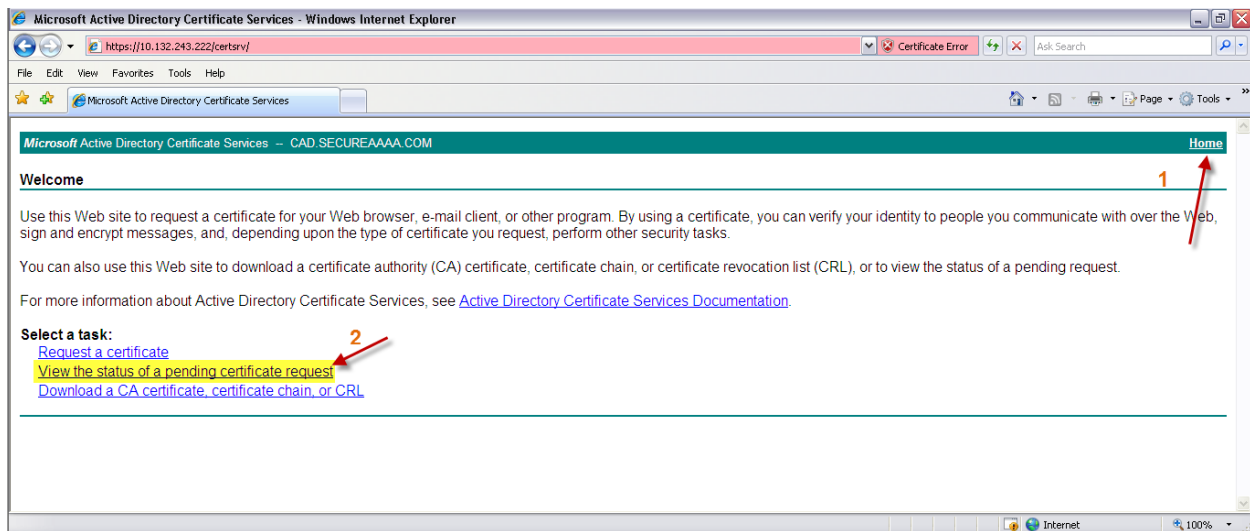

Select YES and please wait

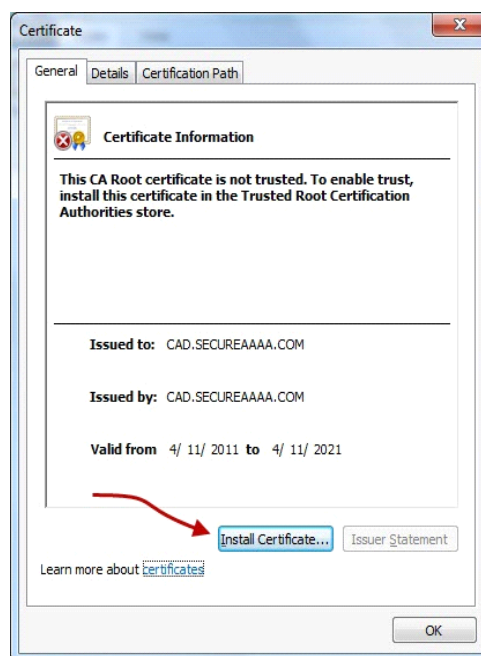

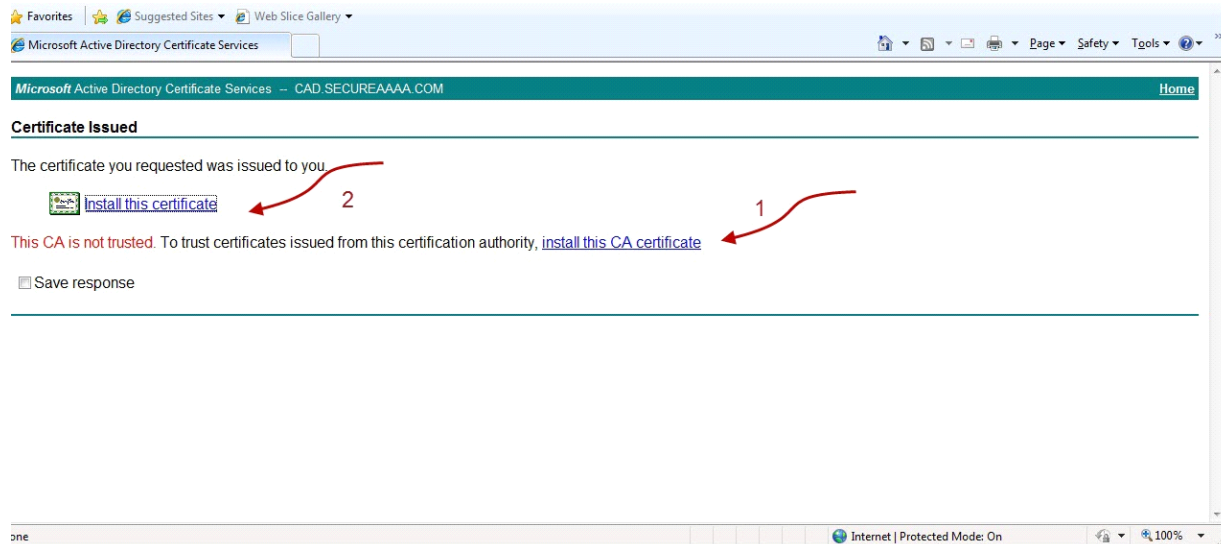

A screenshot of the "Microsoft Active Directory Certificate Services" web interface in Internet Explorer. The URL is https://10.132.243.222/certsrv/certqma.asp. The page has several sections: "Certificate Template:" with a dropdown menu set to "SSLVPN"; "Key Options:" with radio buttons for "Create new key set" (selected) and "Use existing key set", a CSP dropdown set to "Microsoft Enhanced Cryptographic Provider v1.0", a "Key Usage" section with "Exchange" selected, a "Key Size" dropdown set to "1024", and checkboxes for "Automatic key container name" (selected), "Mark keys as exportable", and "Enable strong private key protection"; "Additional Options:" with a "Request Format" section where "PKCS10" is selected (highlighted in yellow), a "Hash Algorithm" dropdown set to "SHA-1", a "Save request" checkbox, and an "Attributes" section with a list box containing "c". At the bottom is a "Friendly Name:" text box and a "Submit >" button. Red arrows point to the "SSLVPN" dropdown, the "PKCS10" radio button, and the "Submit >" button.A screenshot of the "Microsoft Active Directory Certificate Services" web interface in Internet Explorer. The URL is https://10.132.243.222/certsrv/certfnsh.asp. The page title is "Microsoft Active Directory Certificate Services - CAD.SECUREAAAA.COM". The main heading is "Certificate Pending". The text says: "Your certificate request has been received. However, you must wait for an administrator to issue the certificate you requested." Below this, a yellow box contains the text: "Your Request Id is 6661." The text continues: "Please return to this web site in a day or two to retrieve your certificate." A note at the bottom says: "Note: You must return with this web browser within 10 days to retrieve your certificate." On the right side, there is a "Home" link. An orange arrow points to the "Home" link. Below the "Home" link, there is orange text: "In next step select home button". At the bottom center, there is orange text: "You must announce your requestID to sslvpnsupport@mtnirancell.ir".

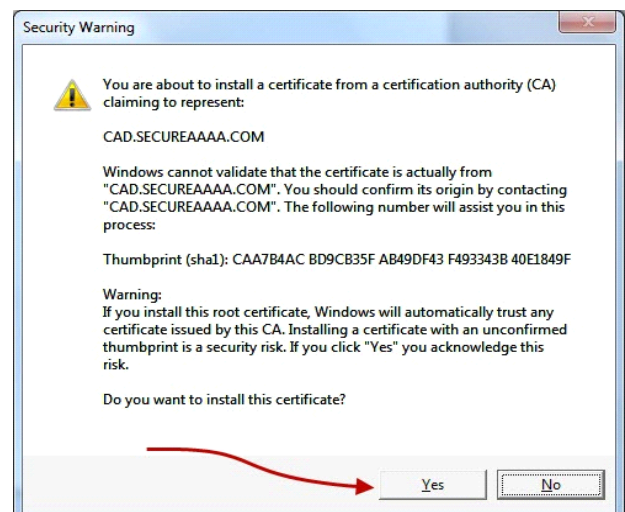

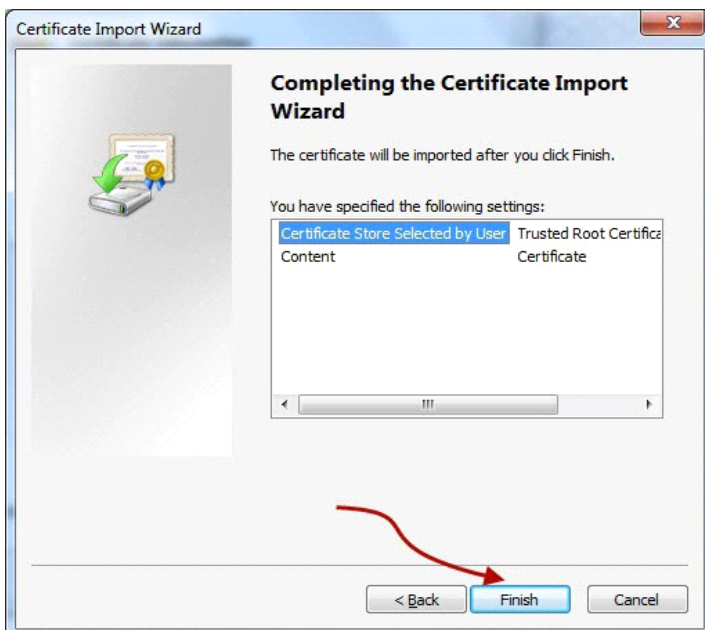

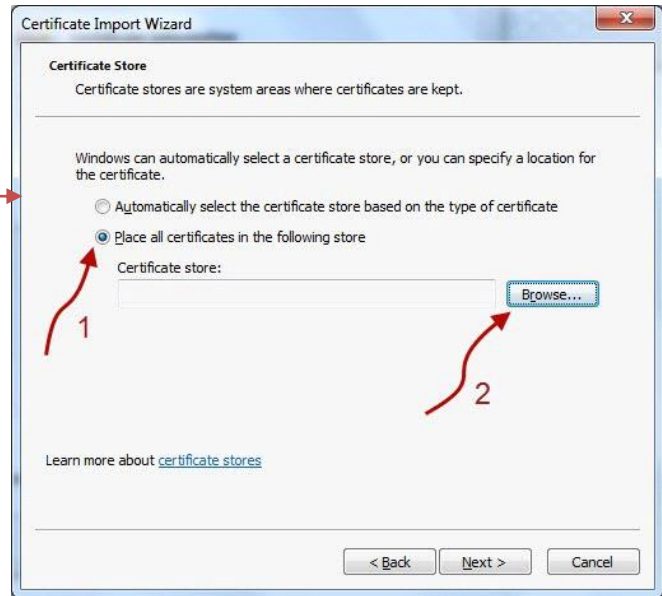

You must announce your request ID to administrator or send mail to **sslvpnsupport@mtnirancell.ir** team to issue your certificate.

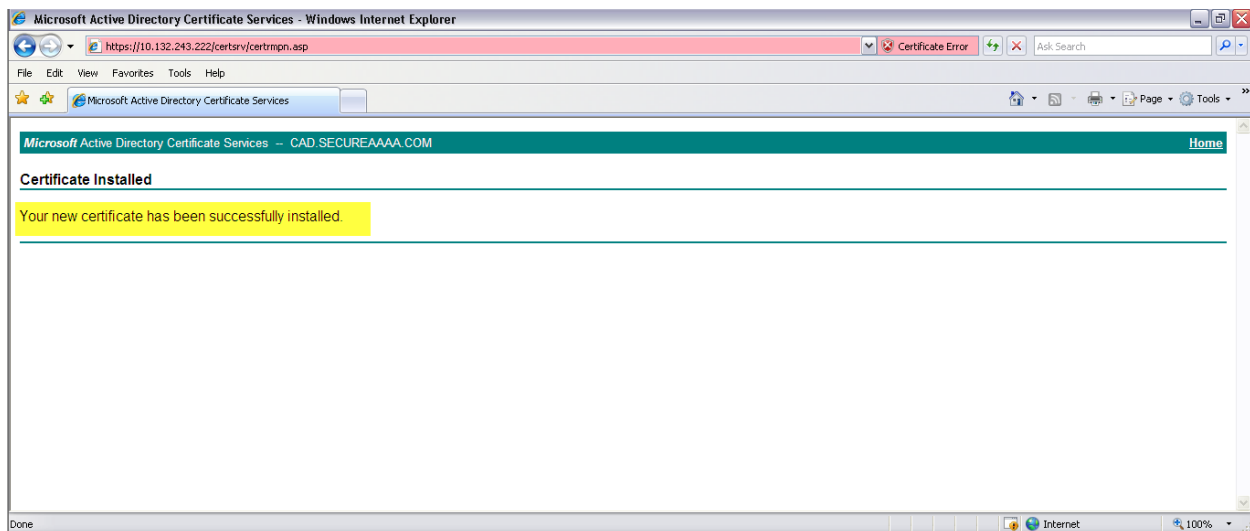

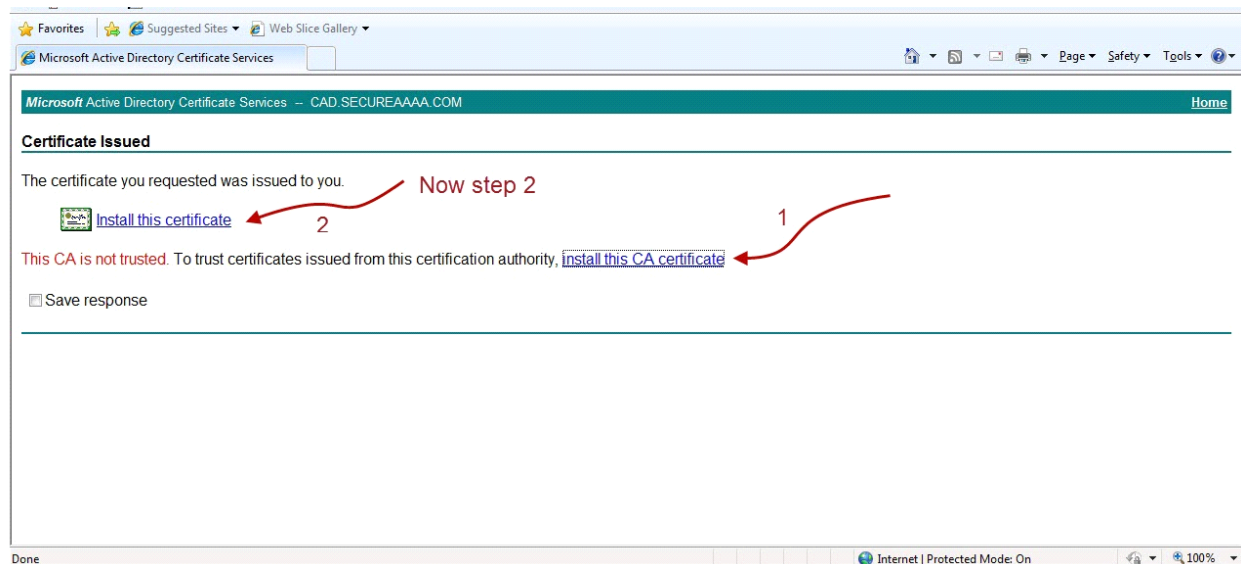

4- Installing certificate

Be sure you connected with **Request_cert** group in Anyconnect:

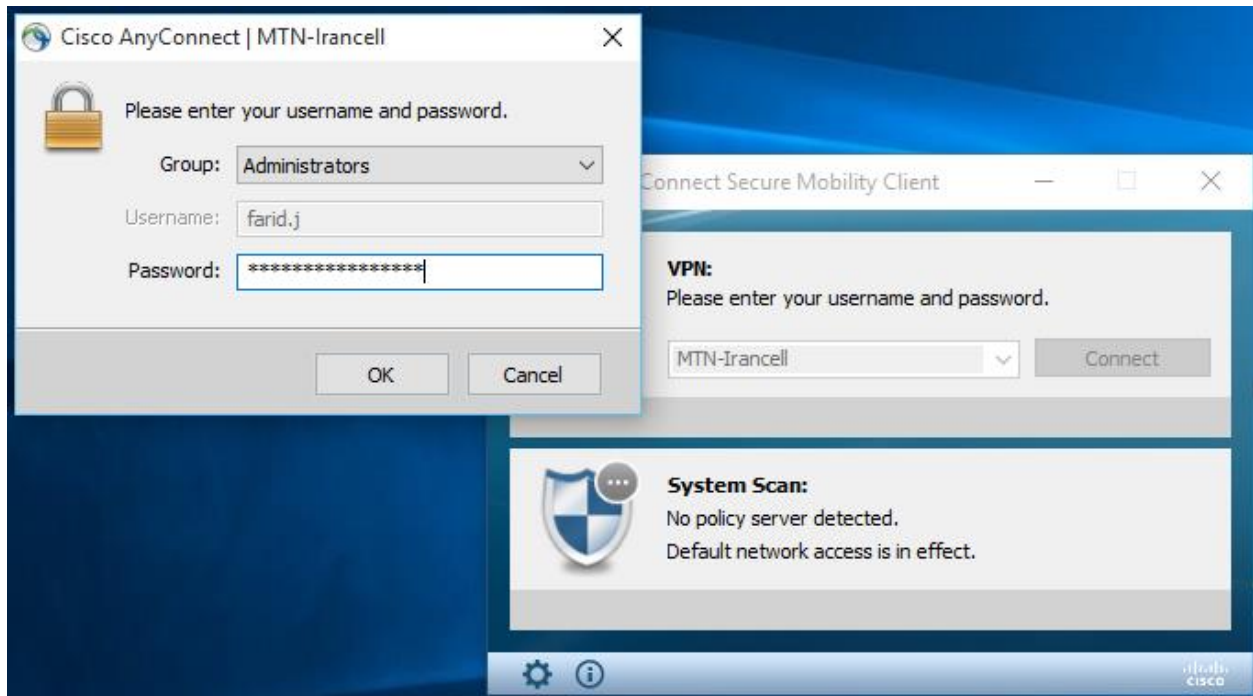

After you installed the certificate, disconnect the connection.

5-Connect with administrator group

Run Cisco AnyConnect program and type **VPNGW.MTNIRANCELL.IR** in front of "connect:". Then push the "connect" button.

You have to select “Administrators” group to connect to network. After selecting this group AnyConnect will put your username automatically in front of “Username” and you should enter your password and push “Ok” button. If you receive any message due to get certificate, select “YES”.

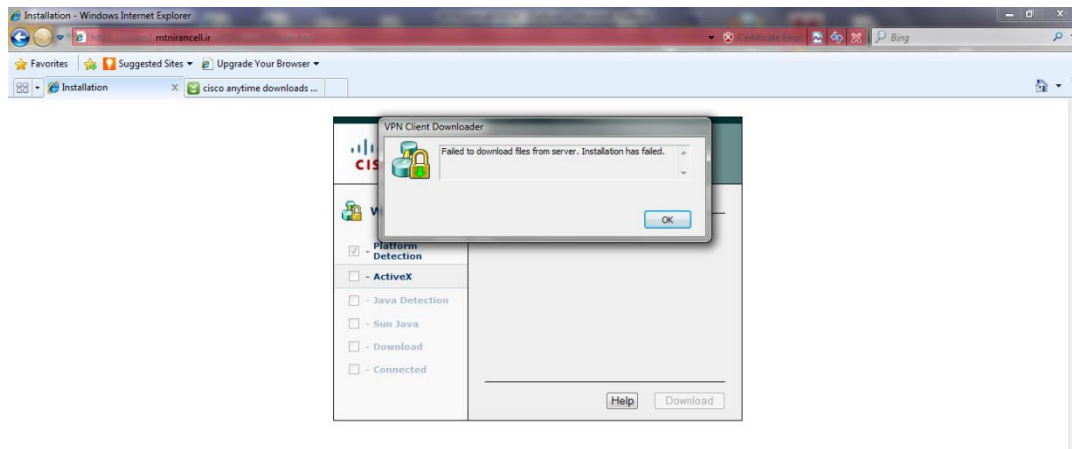

If you got below error after installation please follow step 6 of trouble shooting (Error 4)

6-Trouble shooting

Error 1:

If you have problem during installation like below snapshot:

1-Disable Proxy

Internet Explorer → Tools → Internet option → Connections Tab → LAN Setting → disable proxy server.

2-reset IE Setting:

Internet Explorer → Tools → Internet option → Advance Tab → select Reset Button.

3-Disable antivirus:

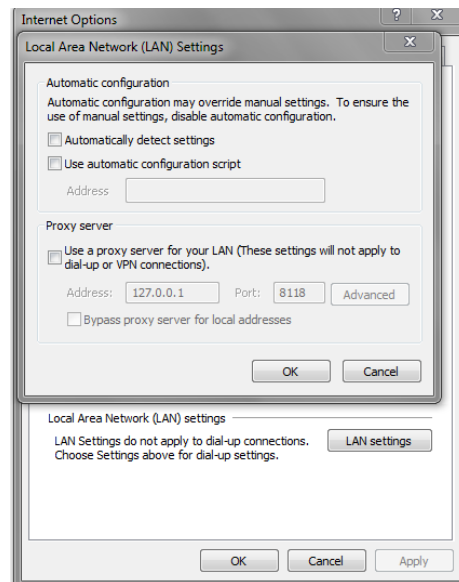

If you still have problem please disable your antivirus.

Error 2:

If you cannot open <https://10.132.243.222/certsrv>

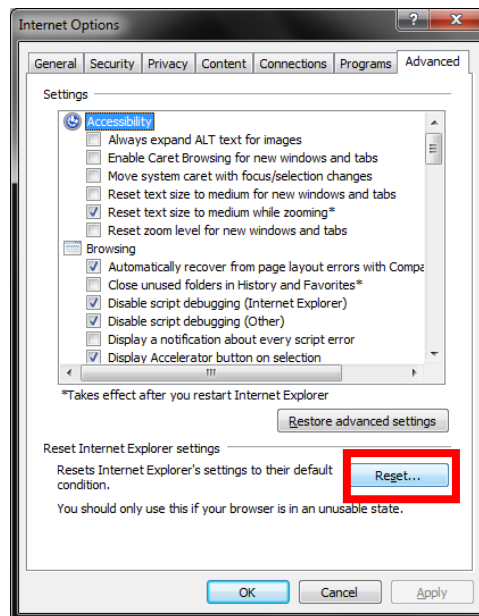

1-Disable Proxy

Internet Explorer → Tools → Internet option → Connections Tab → LAN Setting → disable proxy server.

2-Reset IE Setting

Internet Explorer → Tools → Internet option → Advance Tab → select Reset Button.

Error 3:

If you encountered with this message:

Please follow below procedure and check the **VPN connectivity after each step**:

1- Internet Connectivity Test:

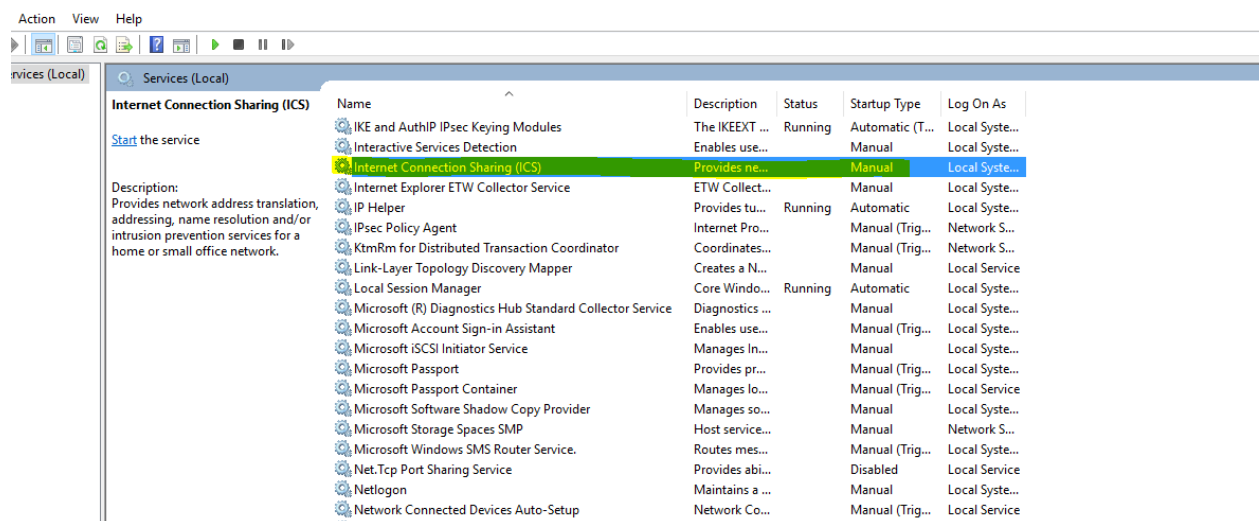

Test your internet connectivity (ping 8.8.8.8) and **vpngw.mtnirancell.ir**

2- Disable proxy:

Internet Explorer → Tools → Internet option → Connections Tab → LAN Setting → disable proxy server.

3- Reset IE (Internet Explorer --Tools --Internet options -- Advance tab -- Reset button).

4- Disable ICS (Run--Services.msc-- Internet connection sharing-- R-click--Stop).

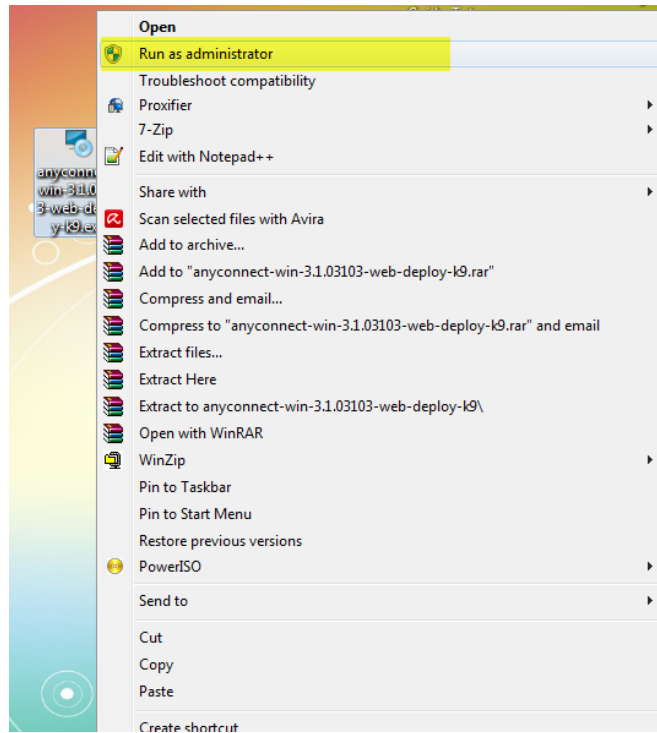

5- Disable firewall and antivirus.

Error 4:

1- Run as Administrator:

Run the software as administrator:

2- Check certificate :

Run – certmgr.msc – Personal – Certificates .

Send us related snapshot .

3-Remove profile configuration's file:

Windows 7:

C:\ProgramData\Cisco\Cisco AnyConnect Secure Mobility Client\Profile remove AnyConnect_Profile_1.xml file.

Windows XP:

C:\Documents and Settings\All Users\Application Data\Cisco\Cisco AnyConnect Secure Mobility Client\Profile remove AnyConnect_Profile_1.xml

After removing AnyConnect_Profile_1.xml file you should connect one time with request_cert group and then disconnect it and connect with administrator group.
